FULCRUM™ LIFTING

TRI-STATE™ WIRE ROPE SUPPLY / KENTUCKIANA™ WIRE ROPE AND SUPPLY / VERNON™ LIFTING PRODUCTS

Fulcrum Lifting offers rigging gear inspections to verify that your materials are OSHA and ASME compliant. Our team has received extensive training by independent third parties and respected world-wide manufacturers to ensure your rigging gear is up to the task.

INSPECTION PLAN PROCESS

Establishing a well communicated plan will help ensure a successful process. Please read and complete this Inspection Plan Form and return to your Fulcrum Lifting representative or to **service@fulcrumlifting.com**. We'll review and schedule as appropriate.

Please have your equipment ready for inspection. Although most items can be inspected on-site, some items may require additional services performed at your local Fulcrum facility or that of the product manufacturer.

Each inspected item will be tagged with a zip tie. Upon request RFID and/or other tags are available at an additional cost. A visit to your facility to best determine the best plan of action may be necessary. Our inspectors tag each item that we have rejected during our inspection with a yellow "DO NOT USE" tag, but WE WILL NOT dispose of materials ourselves unless specifically directed. Please consider having backups on hand, since rejected lifting equipment may be temporarily out of service.

Fulcrum Lifting utilizes the most complete online asset database available. Following the inspection, you'll be provided with a comprehensive and professional report that meets or exceeds OSHA and ASME rigging inspection requirements. The provided report is electronic and printable for your records.
